

WORK CARD 4

DEVELOPMENT OF A VALIDATION SCENARIO FOR THE SELECTED LEARNING OUTCOME

- First, select 3 specific learning outcomes that you would like to verify through the validation process. This may be a skill, knowledge or social competence related to their field of work or education.
- Next, identify the criteria that will be used to assess whether the learning outcomes have been achieved. These criteria should be specific, measurable and objectively assessable.
- Then, appropriate methods should be selected to verify the achievement of the selected learning outcomes.
- Based on the selected methods and criteria, a detailed validation scenario should be developed. The scenario should include a description of the individual steps in the validation process, guidelines for evaluators, and information on the tools and materials needed to perform the validation.
- Prepare a short presentation of your validation scenario in which you present the selected learning outcomes, validation criteria, selected methods and details of the validation scenario.

The work can be done individually or with teams.
