

CASE STUDY 2

AN EXAMPLE OF A GOOD IMPLEMENTATION OF A CLOUD ENVIRONMENT IN THE WORK OF A DISTRIBUTED TEAM: THE COMPANY GLOBALFINANCE

Introduction:

GlobalFinance is an international financial services company specialising in investment advice and financial services. It employs a team of experts from different countries whose work is geographically dispersed. In order to streamline the team's work and ensure secure and efficient access to data, GlobalFinance decided to implement a cloud environment.

Solution:

GlobalFinance decided to implement an end-to-end cloud environment that enables employees to work flexibly from any location and device. With a shared cloud, the team was able to securely store, share and work together on documents, presentations, spreadsheets and other files. All data was stored in the cloud, eliminating the risk of data loss due to hardware failure or other unforeseen event.

Data security was one of the key aspects of implementing a cloud environment. GlobalFinance used a reputable cloud provider that provided advanced security features such as encryption of data in motion and at rest, monitoring of user activities and multi-level authentication. In addition, regular security audits and risk management procedures were in place to minimise risks and protect the confidentiality and integrity of data.

CASE STUDY 2

The implementation of a cloud environment also enabled the integration of various tools and applications that were essential to the team's work. Employees had access to specialised financial software such as data analysis systems, forecasting models or reporting tools. Thanks to the cloud, this software was available in one place and could be run on demand, greatly facilitating the team's work and speeding up business processes.

Communication and collaboration within the team was also an important part of implementing a cloud environment. GlobalFinance used a video conferencing platform and online communication tools that enabled employees to conduct virtual meetings, share information and coordinate activities, as well as a group chat system.
