

TASK 2

Get a piece of paper and a pen.
Read the information below.

PROBLEM SOLVING

A person with this competence can identify emerging problems, prioritise them, measure their impact on performed activities and analyse their causes.

They can also identify effective actions to solve problems, manage their implementation and verify that the desired results have been obtained. They are a person who is not afraid of obstacles, because when they encounter a problem, instead of wringing their hands – they think how to break the problem down and how to deal with it. They don't complain, they just look for a solution right away.

THINK ABOUT

how you deal with problems, how you communicate them, whether you talk about them and try to solve them, or whether you sweep them under the proverbial rug.

You already know how to solve problems from the text you just read, now write down how you do it.

A TASK FOR YOU

How it used to be

How is it

How it should be

Why is it not how it
should be

ABILITY TO SOLVE PROBLEMS

We are not born with this skill, we develop it during practice and by acquiring new skills by undertaking problem solving.
