

WORKSHEET 2

TRANSFORMING

The ability to change selected elements of a given item so that the final effect differs significantly from the initial form. Simplifying, we transform something old into something completely different, new.

An example that can serve as an activity developing creativity is the exercise "Advantages of disadvantages, disadvantages of advantages".

Your task is to see the advantages of a given object as disadvantages, and its disadvantages as advantages.

Example: a trip to the seaside is interesting and educational, but also tiring and expensive.

So how to turn the above features - disadvantages into advantages, and advantages into disadvantages?

In this exercise, it is best to take an object that we know and are able to attribute to it about the same number of advantages and disadvantages - you can describe your friend, for example.

LIST THE FEATURES YOU KNOW:

.....

.....

.....

.....

.....

Try to think through all the listed features and find situations where even the worst flaws can turn out to be useful and positive.

Similarly, try to see when the greatest advantages of the object can turn out to be a bad thing.
