

# Exercise II

3 stages of how to achieve the goal, which we treat as an already existing fact:

## Stage 1

Analyse the situation very thoroughly so that it is clear to you. Thanks to this, you will choose a goal to which you will find the simplest path without any major problems.

## Stage 2

**Your imagination works!** Think positively, but also try to think of all the limitations that may encounter on the way to achieving your goal. Believe, however, that the path you have marked out - for now only in your imagination - will be effective. Don't be afraid to think you've already achieved it. This gives you wings and pushes you to real action.

## Stage 3

Look from the perspective of the already achieved goal - think about which way of achieving it you would definitely not choose, and which one seems to be the simplest and most appropriate. The path of your career does not have to be arduous or troublesome, find the solution that will be the best for you.
